

New, custom composite ceramic (ceramic/rubber) chute liners are now available exclusively through Foothills Steel Foundry

IS THE LINER OF YOUR TRUCK OR CHUTE/CONVEYOR SYSTEM WEARING THIN?

Avoid long term damage and costly downtime by retro fitting a Rubber Chute Liner to your Rock Truck or Chute and Conveyor system.

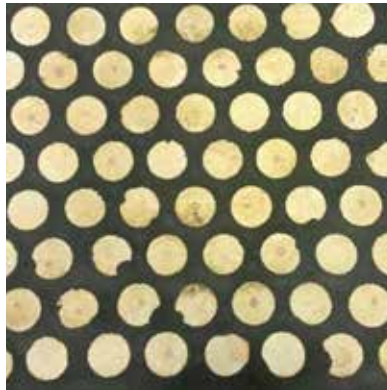

Properly employed, Rubber Chute Liners can last up to 5 times longer than an AR400 plate!

Applications:

The Foothills Rubber Chute liners are suitable for applications in areas of severe impact and areas of high abrasion.

Typically used in applications containing high silica content and high compression strength material, these liners are used in discharge chutes, feed bins, truck beds, and hoppers of any size or type where high abrasion from fine materials is affecting production levels.

Specification:

Composites can be supplied to incorporate a variety of ceramic shapes, including balls, cylinders and cubes, all of which have a high alumina silica content that withstands severe impact and high abrasion, maximizing ROI vs traditional wear plates such as AR or chrome overlays.
